                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1, Application US/09733524A

Patent No. 6534298

GENERAL INFORMATION:
APPLICANT: Taylor, Diane E.
APPLICANT: Taylor, Diane E.
APPLICANT: Ge, Zhongming
TITLE OF INVENTION: WUCLEIC ACIDS ENCODING ALPHA-1,3
TITLE OF INVENTION: EXPRESSING THEM (amended)
FILE REFRENCE: 07254-049002
CURRENT APPLICATION NUMBER: US/09/733,524A
CURRENT APLICATION NUMBER: US 09/092,315
PRIOR APPLICATION NUMBER: US 09/092,315
PRIOR APPLICATION NUMBER: US 60/048,857
PRIOR PILING DATE: 1998-06-05
PRIOR PILING DATE: 1997-06-06
NUMBER OF SEQ. ID NOS: 27

Sequence 8, Application US/09733524A

Patent No. 6534298

GENERAL INPORMATION:
APPLICANT: Taylor, Diane E.
APPLICANT: Taylor, Diane E.
TITLE OF INVENTION: NUCLEIC ACIDS ENCODING ALPHA-1,3

TITLE OF INVENTION: PUCOSYLTRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND TITLE OF INVENTION: PUCOSYLTRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND TITLE OF INVENTION: EXPRESSING THEM (amended)
FILE REFERENCE: 07254-049002

CURRENT PILING DATE: 2006-12-07

PRIOR PILING DATE: 1999-06-05

PRIOR PILING DATE: 1999-06-05

PRIOR PILING DATE: 1997-06-06

NUMBER OF SEQ ID NOS: 27

SOFTWARE: FASLESC for Windows Version 4.0

SEC ID NO 8 105-10-189-977A-8
Sequence 8, Application US/10189977A
Sequence 8, Application US/10189977A
Sequence 8, Patent No. 6962806

Sequence 15, Application US/09733524

Sequence 15, Application US/09733524

Patent No. US20020068347A1

GENERAL INFORMATION:

APPLICANT: The Governers of the University of Alberta, a Canada Corporation

APPLICANT: Taylor, Diane B.

APPLICANT: Taylor, Diane B.

APPLICANT: Ge, Zhongming

TITLE OF INVENTION: PUCOSYLITRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND

TITLE OF INVENTION: EXPRESSING THEM

FILE REFERENCE: 07254/049002

CURRENT PILING THEM

PRIOR FILING DATE: 2000-12-14

PRIOR FILING DATE: 1998-06-05

PRIOR FILING DATE: 1998-06-05

PRIOR FILING DATE: 1997-06-06

NUMBER OF SEQ ID NOS: 20

SOFTMARE: PESTSEQ for Windows Version 4.0
                                                7

Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published_Applications_Main databases.

Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions .rnpbm (Published_Applications_NA_New).

Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions .rapbm (Published_Applications_AA_New).

New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids. Claim 1; SEQ ID NO 18; 97pp; English.

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucosos residue from a donor substrate to an acceptor substrate. The fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contexting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucosy essidue from a donor substrate the acceptor substrate on the glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Producing fucosylated glycoprotein, by contacting recombinant fucosyltransferase protein with mixture comprising donor substrate and acceptor substrate on glycoprotein.

                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (Puth and PutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to Nacctylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation estates of the acceptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ONPNEPSDLVFGSPIGAARKILSYONTKRVFYAGENEVPNFNLFDYAIGFDELDLRDRYL 117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      57
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide encoding fucosyltransferase protein, useful for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 1218 FutB protein sequence of the invention.
                                                                                                                                                                                                                        FutA, FutB, alpha 1-3/4 fucosyltransferase, glycoprotein, glycolipid, fucose, N-acetylglucosamine, glycoconjugate, enzyme.
